## MEET YOUR HIGH PRODUCTION CHALLENGES WITH A ROLL-IN CONFIGURATION

for Blodgett Convection Ovens

Designed for maximum production and transport, the Blodgett Roll-In ovens are the center of any kitchen using mobile production systems. Blodgett convection ovens with the roll-in configuration and transport cart are the only roll-in ovens in the industry that allow for easy loading and unloading of the top oven without interrupting the cooking process of the bottom oven.

The roll-in configurations are manufactured by making these slight modifications to our full size ovens.

- No traditional racks and rack guides are installed. Instead, stainless steel tracks are mounted on the left and right hand bottom interior of the oven.
- A dock-and-lock mechanism is installed.
- Longer leg extensions are used to increase the leg height of double stack ovens to 7" (178mm).

Blodgett provides a variety of transport carts, roll-in pan racks or basket dolly assemblies. One is sure to be right for your application.

**Transport Carts** - Roll all of your product into the oven at once. All roll-in configurations are provided with the appropriate transport cart.

**Roll-in Basket Dollies** - The roll-in dollies are used in conjunction with Arlington baskets for the reconstitution of frozen packs. The baskets (not supplied by Blodgett) simply stack on top of the roll-in dollies.

**Roll-in Pan Racks** - All roll-in pan racks come standard with five racks. Two roll-in pan racks are required for double section ovens.

See page 14 for pricing.
